

SAMA RAGHU

JAVA DEVELOPER

+91 9885670911 | raghusama99@gmail.com | Hyderabad

Objective

Backend Developer with 4.5 years of experience working on product development, focusing on designing, building, and optimizing backend systems for scalable, high performance applications. Expertise in building RESTful APIs using Java and Spring Boot with SQL/MongoDB proficiency. While primarily focused on backend development, possessing a foundational understanding of frontend technologies (JavaScript, ReactJS, HTML, CSS) to support end-to-end integration.

Profile Summary

- Java Backend Developer with 4.5 years of experience in product-based application development.
- Hands-on experience in developing RESTful APIs using Java and Spring Boot, following clean code and best practices.
- Strong understanding of **Core Java, Java 8 features** (Streams, Lambda expressions, Optional)
- Experience working with **MongoDB**, including schema design, queries, and performance considerations.
- Proficient in consuming and integrating **external services using Spring WebClient**, handling synchronous and asynchronous flows.
- Actively involved in **API lifecycle activities** including requirement understanding, implementation, testing, debugging, and optimization.
- Familiar with **Git-based version control systems** (GitHub / Bitbucket) and collaborative development workflows.
- Understanding of **caching mechanisms**, exception handling, and backend performance optimization techniques.
- Currently strengthening **problem-solving and DSA skills** to improve logical thinking and system-level understanding.
- Comfortable working in **Agile development environments** and actively collaborating with team members on technical discussions.
- Hands-on experience in **full-stack development** using **React**, integrating frontend applications with Spring Boot REST APIs.
- Experience using Axios for API communication, handling request/response flows, error handling, and asynchronous data fetching.
- Familiar with Redux for state management, including maintaining global application state and managing data flow between UI components.

Work Experience

- Currently working as a Java developer in Tcs from April 2025
- Worked as Java full-stack developer in SmartImS for a product based application development from April 2022 to April 2025.

Project Experience:

Project 1:

Kemper Life (TCS)

Description: Kemper Life is an insurance management web application developed to streamline policy handling and improve customer experience. It enables users to view, manage, and track policy details, transactions, and coverage efficiently. The application integrates with external services using WebClient to fetch real-time policy data and leverages caching to optimize performance. This backend system supports operations such as retrieving policy details, validating policy IDs, and managing customer related data.

Roles and Responsibilities:

- Developed and maintained scalable backend services using Java and SpringBoot with MySQL
- Implemented RESTful APIs following industry best practices
- worked with version control using Git and GitHub
- Applied advanced Java concepts including Collections, Exception Handling, and Java 8 features
- Conducted code reviews and ensured code quality using Sonarlint and PMD
- Developed and consumed REST APIs, with extensive testing using Postman
- Worked with Hibernate ORM for efficient database operations
- Collaborated in an Agile environment, participating in all phases of the SDLC

Tech Stack: Java, Spring boot, MySQL, Hibernate, Maven

Project 2:

Xymphony Product (SmartImS)

Description: Xymphony by Smart IMS is a sophisticated web application (SAAS) designed to centralize insurance policy management, catering to users' needs for convenient access to policies, claims and billing details across multiple insurance providers and their respective PAAS systems. Through this platform, users can efficiently view, manage, and file claims for their various insurance policies and make changes to existing policies like adding or removing coverage or risk factors, enhancing their overall insurance experience.

Roles and Responsibilities:

- Gained hands-on experience with AWS concepts and log management using Logger
- Designed and implemented high-performance, scalable web applications
- Implemented project configurations including Cookies, Caches, and JWT authentication
- Utilized WebClient and reactive programming for efficient system integration
- Applied advanced Java concepts including Collections, Exception Handling, and Java 8 features
- Conducted code reviews and ensured code quality using Sonarlint ,PMD

Tech Stack: Java, Spring boot, MySQL, Hibernate, Maven
